Dr. Mohammad Daoud (PhD)

15+ Years Experience in AI Product.

AI Architect | Generative & Agentic AI Expert | Data Scientist | MLOps

Google, Microsoft, AWS and IBM Certified

+966-500784207 @ daoudimca@gmail.com

https://www.linkedin.com/in/daoudimca/

SUMMARY

AI Architect with a PhD in Data Science, seeking a challenging role to design and implement advanced AI systems that drive innovation and operational efficiency. Committed to applying deep expertise in machine learning, data-driven architecture, and intelligent systems to support organizational development and contribute meaningfully to societal progress through ethical and impactful AI solutions.

EXPERIENCE

Lead AI Architect & Data Scientist

Solutions by stc / Giza Arabia

17 Feb 2020 - Present Riyadh, KSA

- Forecasting the Hotels/ apartment & ADR occupied inside KSA - **Ministry of Tourism (MOT)**
- Geospatial Data Analysis Data Quality using AI/ ML – **MOT**
- Scrap the from Google Map using apify.com - **MOT**
- Generating labels for Text (Arabic and English)- **IMO Ministry**.
- Chatbot using rasa framework – **IMO Ministry**
- RAG LLM model , Data Q&A, Summery, Sentiment Analysis - **IMO Ministry**
- Extract the information from Images and Pdf - Computer Vision, OCR and NLP - AI / ML and OCR - **STC**
- Incident Management Use Case – Data Science – EDA, AI / ML - **STC**
- Work Order Management Use Case - EDA, ML and AI - **STC**
- User Pattern identification in IVR System - EDA, AI / ML - **STC**
- Catalyst Project 2020 - Digital BPM for faster network infrastructure deployment – AI / ML - **STC**
- Skill Based Job Recommendation System - CB, CS - **HRDF Ministry**

Associate Consultant

Wipro

17 Jan 2019 – 10 Feb 2020 Bangalore, India

- Social inferencing – AI / ML, NLP, Twitter
- Anomaly detection – AI / ML
- Sentiment Analysis – NLP/ML

Tech Architecture Delivery Team Lead

Accenture

15 May 2017 – 15 Jan 2019 Bangalore, India

- Image Classification and extract the text from Images – Google Inception / NLP / OCR
- Catboat for home and Car damage – NLU / NLP
- Churn, Winback and High value bundles - Customer EDA Analysis, Segmentation & Prediction – EDA, AI / ML

TECH STACK

Python R C SQL

Deep Learning Machine Learning

Generative AI RAG

Chat bot NLU NLP LLM

Recommendation system Dataiku

Computer Vision OCR Open-CV

Tableau Power Bi Alteryx plotly

Docker Kubernetes Flask Fast API

CI/CD Pipelines Vertex AI Airflow

AI Agents N8N AutoGen PhiData Langchain

Vector DB: Pinecone, Weaviate, Chroma, Faiss

TensorFlow PyTorch, sklearn

Time-Series Analysis Pandas numpy

Kafka NIFI

Senior Software Engineer

Monster India

19 Sept 2016 – 2017 May Noida, India

- Implement the job Recommendation system with Collaborative Filtering and Cosine Similarity using Python – EDA, AI / ML
- Implement the Similarity model which identify similar type of user who have most common skills – EDA, AI / ML
- Implement the model which used to identify the most frequent skills that used together – EDA, AI / ML

Data Scientist

Claym Media

17 Aug 2015 – 13 Sept 2016 Gurugram, India

- Working as a data scientist to develop a model on predictive analysis to determine the behaviour of a user towards advertisement appear in mobiles – EDA, AI / ML
- Classification for predictive analysis was done by using the user agent string generated when a user clicks on an advertisement on his/her mobile – EDA and ML
- Sentiments analysis was done to find the performance of mobile apps Research on Mobile apps digital marketing – EDA, AI / ML

Data Scientist

Indian Institute of Technology (IIT)

17 Aug 2015 – 13 Sept 2016 Delhi, India

- Work on recommendation system and publish research paper on recommendation system – EDA, AI / ML, Recommendation System Invented the new Recommendation system architecture – EDA, AI / ML, Recommendation System
- Develop the new data mining algorithm for handling the new user and new item problem in ecommerce Recommendation system
- Data gathering, cleaning, validation, quality, exploratory data analysis

ACADEMIC QUALIFICATIONS

Doctor of Philosophy (Computer Science)

Ph.D-2016 . Enrollment Number: - 2011050168 from Singhania University, India

RESEARCH TOPIC:

"Mining user generated content for development of Recommendation system".

M.Sc.Tech in Industrial Mathematics with Computer Application (Three years professional course) -2005 - 2008

from Jamia Millia Islamia (Central University)- first Rank university New Delhi, India

LANGUAGES KNOWN

Hindi (Fluent), English (Fluent), Urdu(Average)

PERSONAL PROFILE

Date of Birth: 28th February 1986

Nationality: Indian

Gender: Male

Marital Status: Married

CERTIFICATION

Cloud Digital Leader - Google

AWS Certified Cloud Practitioner - AWS

Microsoft Certified Azure Data Scientist - Microsoft

Artificial Intelligence Engineer - Microsoft

Azure Fundamentals - Microsoft

watsonx.ai - IBM

watsonx.data - IBM

Google Analytics - Google

Yellow belt - SIX Sigma

Analyst Certification - Contentsquare

Convolutional Neural Networks - deeplearning.ai

Improving Deep Neural Networks: Hyperparameter tuning, Regularization and Optimization - deeplearning.ai

Neural Networks and Deep Learning - deeplearning.ai

Structuring Machine Learning Projects - deeplearning.ai

Sequence Models - deeplearning.ai

AI From the Data Center to the Edge - An Optimized Path Using Intel® Architecture - Intel AI

Incorta 4 Essentials for Business Users and Analysts - Incorta

Incorta 5 Fundamentals for Administrators - Incorta

Project Portfolio

Generative AI & LLM Projects

• AI-Powered ATS Resume Screening System: Designed and developed an end-to-end AI Application (https://airesume-mkva.onrender.com/) that leverages Large Language Models (LLMs) and intelligent agents to automate the recruitment workflow. The system intelligently parses job descriptions from any provided URL (e.g., LinkedIn) and performs a deep, semantic analysis of candidate resumes, providing instant compatibility scores and insights to streamline hiring.

Ministry of Tourism (MT), KSA

· AI-Powered Data Unification & Black-market Hotel Detection

· Architected an AI-driven data quality pipeline to ingest and unify disparate hotel industry datasets from multiple sources. Implemented advanced fuzzy matching and entity resolution techniques to map and deduplicate records using various parameters (e.g., hotel name, location, contact details). Developed a model to identify and filter out black-market hotel listings by validating information against official registries and using geospatial analysis to confirm the actual existence of listed properties, significantly improving data integrity for the ministry.

· Forecasting Hotel/Apartment Occupancy & ADR

· Developed and implemented time-series forecasting models to predict occupancy rates and Average Daily Rates (ADR) for accommodations across KSA, enabling data-driven strategic planning for the tourism sector.

· Google Maps Data Scraping

Engineered a data acquisition pipeline using Apify.com to efficiently scrape and structure publicly available data from Google Maps, providing valuable insights into points of interest for tourism analysis.

HRDF Ministry

· Skill-Based Job Recommendation System

Architected a recommendation system using Content-Based (CB) and Collaborative Filtering (CS) techniques to match candidates with relevant job opportunities based on their skillset, supporting national workforce development.

IMO Ministry (Saudi Royal Court)

· Text Label Generation (Arabic & English)

· Built an NLP system to automatically generate accurate labels for large volumes of text in both Arabic and English, facilitating efficient data categorization and retrieval.
· Chatbot Development (Rasa Framework): Designed and deployed an AI-powered chatbot using the Rasa framework to handle user inquiries, automating customer service and improving response times for the ministry.

· RAG LLM for Data Q&A, Summarization, and Sentiment Analysis (Arabic & English)

· Implemented a Retrieval-Augmented Generation (RAG) model with Large Language Models (LLMs) to create an intelligent system capable of answering complex questions, summarizing documents, and performing sentiment analysis on textual data.

stc (Saudi Telecom Company)

· Information Extraction from Images & PDFs:

· Leveraged Computer Vision, OCR, and NLP technologies to automatically extract and structure key information from unstructured documents like images and PDFs, streamlining data processing workflows.

· Incident Management Automation:

· Applied Exploratory Data Analysis (EDA) and Machine Learning to historical incident data to build predictive models, aiming to automate ticket routing, predict resolution times, and improve overall operational efficiency.

· Work Order Management Optimization:

· Used EDA and ML to analyze work order data, identifying patterns and bottlenecks to optimize scheduling, resource allocation, and predictive maintenance for field operations.

· User Pattern Identification in IVR System:

· Analyzed call log data from the Interactive Voice Response (IVR) system using EDA and ML to identify common user patterns and pain points, leading to recommendations for improving the customer service experience.

· Catalyst Project 2020 - Digital BPM

· Contributed AI/ML expertise to a digital Business Process Management (BPM) initiative designed to accelerate and optimize the deployment of network infrastructure.

· Citibank UK

. Competitive Social Media Intelligence for Banking Sector: Executed a large-scale NLP project analyzing 6 months of Twitter data for Citibank UK, HSBC, and Lloyds Bank. Developed a multi-class classification model to categorize tweets into key service areas (Internet Banking, Customer Support, Branch Support, Others) and demographic segments (Male/Female users). The analysis provided strategic insights into each bank's perceived performance across categories and revealed gender-based sentiment trends, enabling data-driven competitive positioning.
